accounts-base

[Source code of released version](#) | [Source code of development version](#)

Meteor's user account system. This package implements the basic functions necessary for user accounts and lets other packages register login services. Some of these services are in the following packages:

- `accounts-password`
- `accounts-facebook`
- `accounts-google`
- `accounts-github`
- `accounts-twitter`
- `accounts-meetup`
- `accounts-weibo`

There are also login services available in community packages.

For more information, see the [Meteor docs](#) and the Meteor Accounts [project page](#).
