`href` Interpolation Failed

Why This Error Occurred   Somewhere you are utilizing the `next/link` component, `Router#push`, or `Router#replace` with `href` interpolation to build dynamic routes but did not provide all of the needed dynamic route params to properly interpolate the `href`.

Note: this error will only show when the `next/link` component is clicked not when only rendered.

Invalid `href` interpolation

```
import Link from 'next/link'

export default function BlogLink() {
  return (
    <Link
      href={{
        pathname: '/blog/[post]/[comment]',
        query: { post: 'post-1' },
      }}
    >
      <a>Invalid link</a>
    </Link>
  )
}
```

Valid `href` interpolation

```
import Link from 'next/link'

export default function BlogLink() {
  return (
    <Link
      href={{
        pathname: '/blog/[post]/[comment]',
        query: { post: 'post-1', comment: 'comment-1' },
      }}
    >
      <a>Valid link</a>
    </Link>
  )
}
```

Possible Ways to Fix It   Look for any usage of the `next/link` component, `Router#push`, or `Router#replace` and make sure that the provided `href` has all needed dynamic params in the query.
