Page.waitForXPath() method

Wait for the `xpath` to appear in page. If at the moment of calling the method the `xpath` already exists, the method will return immediately. If the `xpath` doesn't appear after the `timeout` milliseconds of waiting, the function will throw.

This method works across navigation

```js
const puppeteer = require('puppeteer');
(async () => {
const browser = await puppeteer.launch();
const page = await browser.newPage();
let currentURL;
page
.waitForXPath('//img')
.then(() => console.log('First URL with image: ' + currentURL));
for (currentURL of [
'https://example.com',
'https://google.com',
'https://bbc.com',
]) {
await page.goto(currentURL);
}
await browser.close();
})();
```

Signature:

```
waitForXPath(xpath: string, options?: {
        visible?: boolean;
        hidden?: boolean;
        timeout?: number;
    }): Promise<ElementHandle | null>;
```

Parameters

Parameter	Type	Description
xpath	string	A xpath of an element to wait for
options	{ visible?: boolean; hidden?: boolean; timeout?: number; }	Optional waiting parameters

Returns:

Promise<ElementHandle | null>

Promise which resolves when element specified by xpath string is added to DOM. Resolves to `null` if waiting for `hidden: true` and xpath is not found in DOM.

Remarks

The optional Argument `options` have properties:

- `visible`: A boolean to wait for element to be present in DOM and to be visible, i.e. to not have `display: none` or `visibility: hidden` CSS properties. Defaults to `false`.

- `hidden`: A boolean wait for element to not be found in the DOM or to be hidden, i.e. have `display: none` or `visibility: hidden` CSS properties. Defaults to `false`.

- `timeout`: A number which is maximum time to wait for in milliseconds. Defaults to `30000` (30 seconds). Pass `0` to disable timeout. The default value can be changed by using the Page.setDefaultTimeout() method.
