Macports plugin

This plugin adds completion for the package manager Macports, as well as some aliases for common Macports commands.

To use it, add `macports` to the plugins array in your zshrc file:

```
plugins=(... macports)
```

Aliases

Alias	Command	Description
pc	`sudo port clean --all installed`	Clean up intermediate installation files for installed ports
pi	`sudo port install`	Install package given as argument
pli	`port livecheck installed`	Check for updates for installed ports
plm	`port-livecheck-maintainer`	Check for updates of ports mainained by the specified users
psu	`sudo port selfupdate`	Update ports tree with MacPorts repository
puni	`sudo port uninstall inactive`	Uninstall inactive ports
puo	`sudo port upgrade outdated`	Upgrade ports with newer versions available
pup	`psu && puo`	Update ports tree, then upgrade ports to newest versions

Commands

port-livecheck-maintainer

```
Usage:
  port-livecheck-maintainer
  port-livecheck-maintainer (maintainer)+
  port-livecheck-maintainer -h|--help

Check

Options:
  maintainer   maintainer id
  -h           print this help message and exit
```

Checks whether updates are available for ports whose maintainer is the current user, or any of a specified list of maintainer expressions. The current user maintainer id is retrieved as follows:

- The value of the `MACPORTS_MAINTAINER` variable, if set and not null.

- The value of the USER variable.
