# SharedUtils

This library was generated with Angular CLI version 8.0.0.

## Code scaffolding

Run `ng generate component component-name --project shared-utils` to generate a new component. You can also use `ng generate directive|pipe|service|class|guard|interface` `--project shared-utils`.

> Note: Don't forget to add `--project shared-utils` or else it will be added to the default project in your `angular.json` file.

## Build

Run `ng build shared-utils` to build the project. The build artifacts will be stored in the `dist/` directory.

## Publishing

After building your library with `ng build shared-utils`, go to the dist folder `cd dist/shared-utils` and run `npm publish`.

## Running unit tests

Run `ng test shared-utils` to execute the unit tests via Karma.

## Further help

To get more help on the Angular CLI use `ng help` or go check out the Angular CLI README.
