Language generation

Based on the script `run_generation.py`.

Conditional text generation using the auto-regressive models of the library: GPT, GPT-2, Transformer-XL, XLNet, CTRL. A similar script is used for our official demo Write With Transfomer, where you can try out the different models available in the library.

Example usage:

```
python run_generation.py \
    --model_type=gpt2 \
    --model_name_or_path=gpt2
```
