# Rake plugin

This plugin adds support for rake, the Ruby build tool or Ruby Make.

To use it, add `rake` to the plugins array in your zshrc file:

```
plugins=(... rake)
```

## Aliases

The plugin aliases the rake command so you can pass arguments when invoking rake tasks without having to escape the brackets, i.e., you can run

```
rake namespace:task['argument']
```

instead of having to do

```
rake namespace:task\['argument'\]
```

| Alias | Command | Description |
| --- | --- | --- |
| rake | noglob rake | Allows unescaped square brackets |
| bin/rake | noglob bin/rake | Same as above but using rake binstub |
| brake | noglob bundle exec rake | Same as above but call rake using bundler |
| srake | noglob sudo rake | Same as rake but using sudo |
| sbrake | noglob sudo bundle exec rake | Same as above but using both sudo and bundler |

## Jim Weirich

The plugin also aliases `rake` to `jimweirich`, author of Rake and big time contributor to the Ruby open source community. He passed away in 2014:

> Thank you Jim for everything you contributed to the Ruby and open source community over the years. We will miss you dearly. — **@robbyrussell**
