IpcRendererEvent Object extends `Event`

- `sender` IpcRenderer - The `IpcRenderer` instance that emitted the event originally
- `senderId` Integer - The `webContents.id` that sent the message, you can call `event.sender.sendTo(event.senderId, ...)` to reply to the message, see [ipcRenderer.sendTo](#) for more information. This only applies to messages sent from a different renderer. Messages sent directly from the main process set `event.senderId` to `0`.
- `ports` MessagePort[] - A list of MessagePorts that were transferred with this message
