Supabase Authentication

This example shows how to use Supabase Auth on the client and server in both [API Routes](#) and when using [server-side rendering (SSR)](#).

Deploy with Vercel

The Vercel deployment will guide you through creating a Supabase account and project. After installation of the Supabase integration, all relevant environment variables will be set up so that the project is usable immediately after deployment 🚀

▲ Deploy

Feedback and issues

Please file feedback and issues over on the [Supabase GitHub org](#).
