API Examples

This folder contains small example apps that get in-lined into our API docs. Each example contains tests for application behavior (as opposed to testing Angular's behavior) just like an Angular application developer would write.

Running the examples

```
# Serving individual examples (e.g. common)
yarn bazel run //packages/examples/common:devserver

# "core" examples
yarn bazel run //packages/examples/core:devserver
```

Running the tests

```
yarn bazel test //packages/examples/...
```
