Overmind example

This example uses [overmind](#).

Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

▲ **Deploy**

How to use

Execute `create-next-app` with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example with-overmind with-overmind-app
# or
yarn create next-app --example with-overmind with-overmind-app
# or
pnpm create next-app -- --example with-overmind with-overmind-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).

Notes

Look at the comments for more information on how the application is structured. This is just one of several ways you can manage hydration and rehydration of state. It depends heavily on how you want to manage it, do code sharing between client and server etc. The exampled approach should give you the hooks and flexibility to get you started on your endeavor :-)
