自定义日历头部内容。

en-US

Customize Calendar header content.

```jsx
import { Calendar, Select, Radio, Col, Row, Typography } from 'antd';

function onPanelChange(value, mode) {
  console.log(value, mode);
}

export default () => (
  <div className="site-calendar-customize-header-wrapper">
    <Calendar
      fullscreen={false}
      headerRender={({ value, type, onChange, onTypeChange }) => {
        const start = 0;
        const end = 12;
        const monthOptions = [];

        const current = value.clone();
        const localeData = value.localeData();
        const months = [];
        for (let i = 0; i < 12; i++) {
          current.month(i);
          months.push(localeData.monthsShort(current));
        }

        for (let index = start; index < end; index++) {
          monthOptions.push(
            <Select.Option className="month-item" key={`${index}`}>
              {months[index]}
            </Select.Option>,
          );
        }
        const month = value.month();

        const year = value.year();
        const options = [];
        for (let i = year - 10; i < year + 10; i += 1) {
          options.push(
            <Select.Option key={i} value={i} className="year-item">
              {i}
            </Select.Option>,
          );
        }
        return (
          <div style={{ padding: 8 }}>
```

```jsx
            <Typography.Title level={4}>Custom header</Typography.Title>
            <Row gutter={8}>
              <Col>
                <Radio.Group size="small" onChange={e =>
onTypeChange(e.target.value)} value={type}>
                  <Radio.Button value="month">Month</Radio.Button>
                  <Radio.Button value="year">Year</Radio.Button>
                </Radio.Group>
              </Col>
              <Col>
                <Select
                  size="small"
                  dropdownMatchSelectWidth={false}
                  className="my-year-select"
                  onChange={newYear => {
                    const now = value.clone().year(newYear);
                    onChange(now);
                  }}
                  value={String(year)}
                >
                  {options}
                </Select>
              </Col>
              <Col>
                <Select
                  size="small"
                  dropdownMatchSelectWidth={false}
                  value={String(month)}
                  onChange={selectedMonth => {
                    const newValue = value.clone();
                    newValue.month(parseInt(selectedMonth, 10));
                    onChange(newValue);
                  }}
                >
                  {monthOptions}
                </Select>
              </Col>
            </Row>
          </div>
        );
      }}
      onPanelChange={onPanelChange}
    />
  </div>
);
```

```css
.site-calendar-customize-header-wrapper {
  width: 300px;
  border: 1px solid #f0f0f0;
  border-radius: 2px;
}
```
