Outstanding on the `Todo` app

`Todo` app

- ☒ Clicking archive removes todo item.
- ☒ Update `Todo` app to match http://todomvc.com/.
- ☐ Make it work with `[(ngModel)]`.
- ☐ Make it work with `(keyup.Enter)`.

Compiler

- ☒ Remove `tslib_1.__decorate([core_1.Input(), tslib_1.__metadata("design:type", Object)], TodoComponent.prototype, "todo", void 0);` from generated output.
- ☐ Allow compilation of `@angular/common` through ivy.

Ivy Runtime

- ☒ Work on `ViewContainerRef` needs to cause change detection so that `todo` app renders correctly on first render.
- ☒ The todo input value box is not correctly rendering to checked for completed tasks.
- ☐ `ViewContainerRef` must separate creation mode from update mode otherwise {{todo.done}} fails for `NgFor` because `todo` is not set during creation mode.
- ☐ Injector should be optional

Testing

- ☐ Create a debug mode which would publish components into DOM for easier writing of tests.

NOTES

Killing hung `iblaze` server

At times the `iblaze run packages/core/test/bundling/todo:devserver` keeps running and holding onto ports even after `ctrl-c`. This command kills the outstanding processes.

```
kill -9 $(ps aux | grep ibazel\\\|devserver | cut -c 17-23)
```
