Frame.waitForTimeout() method

Causes your script to wait for the given number of milliseconds.

Signature:

```
waitForTimeout(milliseconds: number): Promise<void>;
```

Parameters

Parameter	Type	Description
milliseconds	number	the number of milliseconds to wait.

Returns:

Promise<void>

Remarks

It's generally recommended to not wait for a number of seconds, but instead use Frame.waitForSelector(), Frame.waitForXPath() or Frame.waitForFunction() to wait for exactly the conditions you want.

Example

Wait for 1 second:

```
await frame.waitForTimeout(1000);
```
