A nightly build from the [main](#) branch is published nightly to NPM and NuGet. Here is how you can get it and use it with your tools.

Using npm

```
npm install -g typescript@next
```

Using NuGet with MSBuild:

> Note: You'll need to configure your project to use the NuGet packages. Please see [Configuring MSBuild projects to use NuGet](#) for more information.

The nightlies are available on https://www.myget.org/gallery/typescript-preview

There are two packages:

- `Microsoft.TypeScript.Compiler` : Tools only (`tsc.exe` , `lib.d.ts` , etc.) .
- `Microsoft.TypeScript.MSBuild` : Tools as above, as well as MSBuild tasks and targets (`Microsoft.TypeScript.targets` , `Microsoft.TypeScript.Default.props` , etc.)

Visual Studio Code

1. Install the npm package `npm install typescript@next` , to your local `node_modules` folder.

2. Update, `.vscode/settings.json` with the following:

   ```
   "typescript.tsdk": "<path to your folder>/node_modules/typescript/lib"
   ```

Sublime Text

1. Install the npm package `npm install typescript@next` , to a local `node_modules` folder, then

2. Update the `Settings - User` file with the following:

   ```
   "typescript_tsdk": "<path to your folder>/node_modules/typescript/lib"
   ```

More information is available at: https://github.com/Microsoft/TypeScript-Sublime-Plugin#installation

Visual Studio 2013 and 2015

> Note: Most changes do not require you to install a new version of the VS TypeScript plugin in.

The nightly build currently does not include the full plugin setup, but we are working on publishing an installer on a nightly basis as well.

1. First, install the npm package with `npm install typescript@next` to a local `node_modules` folder, then

2. Download the [VSDevMode.ps1](#) script.

> *Also see our wiki page on [using a custom language service file](#).*

3. From a powershell command window, run:

   - VS 2015:

     ```
     VSDevMode.ps1 14 -tsScript <path to your
     folder>/node_modules/typescript/lib
     ```

   - VS 2013:

     ```
     VSDevMode.ps1 12 -tsScript <path to your
     folder>/node_modules/typescript/lib
     ```
