BrowserFetcher.download() method

Initiates a GET request to download the revision from the host.

Signature:

```
download(revision: string, progressCallback?: (x: number, y: number) => void):
Promise<BrowserFetcherRevisionInfo>;
```

Parameters

Parameter	Type	Description
revision	string	The revision to download.
progressCallback	(x: number, y: number) => void	A function that will be called with two arguments: How many bytes have been downloaded and the total number of bytes of the download.

Returns:

Promise<BrowserFetcherRevisionInfo>

A promise with revision information when the revision is downloaded and extracted.

Remarks

This method is affected by the current `product` .
