ReactMD, Next.js, and Typescript Example

This example sets up a simple [ReactMD](#), Next.js, and Typescript app featuring:

- `_variables.scss` to override the default `react-md` theme and feature toggles
- [app.scss](#) global styles that conditionally apply the dark theme based on the user's OS preferences
- a custom [_app.tsx](#) that uses a persistent layout
- a reusable [Layout.tsx](#) that:
  - updates all the icons to use `SVGIcon` s instead of `FontIcon` s
  - initializes the `Layout` component from `react-md` with navigation items

For more information about ReactMD's features, styling, components, and API, check out the [main documentation](#). You can also view the [documentation site's source code](#) for a more complex example of using ReactMD + Next.js.

Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

[▲ Deploy]

How to use

Execute [`create-next-app`](#) with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example with-react-md-typescript with-react-md-typescript-app
# or
yarn create next-app --example with-react-md-typescript with-react-md-typescript-app
# or
pnpm create next-app -- --example with-react-md-typescript with-react-md-typescript-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
