kube-scheduler

Implements KEP 115 - Moving ComponentConfig API types to staging repos

This repo provides external, versioned ComponentConfig API types for configuring the kube-scheduler. These external types can easily be vendored and used by any third-party tool writing Kubernetes ComponentConfig objects.

Compatibility

HEAD of this repo will match HEAD of k8s.io/apiserver, k8s.io/apimachinery, and k8s.io/client-go.

Where does it come from?

This repo is synced from https://github.com/kubernetes/kubernetes/tree/master/staging/src/k8s.io/kube-scheduler. Code changes are made in that location, merged into `k8s.io/kubernetes` and later synced here by a bot.
