## session

Source code of released version | Source code of development version ***

This package provide `Session`. `Session` is a special ReactiveDict whose contents
are preserved across Hot Code Push. It's usually used to store the current state
of the user interface, for example, the currently selected row in a table, ora flag
indicating if a dialog box is open.

Full documentation of `Session` can be found on the main Meteor docs page.

## Future work

Unify with reactive-dict.
