Invalid webpack resolve alias

Why This Error Occurred   When overriding `config.resolve.alias` incorrectly in `next.config.js` webpack will throw an error because private-next-pages is not defined.

Possible Ways to Fix It   This is not a bug in Next.js, it's related to the user adding a custom webpack(config) config to next.config.js and overriding internals by not applying Next.js' aliases. Solution would be:

```
webpack(config) {
  config.resolve.alias = {
    ...config.resolve.alias,
    // your aliases
  }
}
```
