## `next export` No Custom Routes

**Why This Error Occurred**

In your `next.config.js` `rewrites`, `redirects`, or `headers` were defined while `next export` was being run outside of a platform that supports them.

These configs do not apply when exporting your Next.js application manually.

**Possible Ways to Fix It**

Disable the `rewrites`, `redirects`, and `headers` from your `next.config.js` when using `next export` to deploy your application or deploy your application using [a method](#) that supports these configs.
