is-alphanumerical

build passing · coverage 100% · downloads 31M/month · minzipped size 253 B

Check if a character is alphanumerical (`[a-zA-Z0-9]`).

Install

[npm](#):

```
npm install is-alphanumerical
```

Use

```
var alphanumerical = require('is-alphanumerical')

alphanumerical('a') // => true
alphanumerical('Z') // => true
alphanumerical('0') // => true
alphanumerical(' ') // => false
alphanumerical('💩') // => false
```

API

`alphanumerical(character)`

Check whether the given character code (`number`), or the character code at the first position (`string`), is alphanumerical.
