Experimental Features

Features list here are not fully tested and may be removed in future releases.

Custom GeoSite group setting (v4.1.xx.x)   In `gui-config.json` file, add `geositeGroup` string value. Shadowsocks will generate rule using this group. Add `geositeBlacklistMode` boolean value to control which rule mode Shadowsocks will generate. `true` for blacklist, `false` for whitelist. Default behavior is generate blacklist for `geolocation-!cn`.

Custom GFWList source URL (v4.1.9.0-v4.1.10.0)   In `gui-config.json` file, add `gfwListUrl` key-value. Shadowsocks would fetch the GFWList content from this URL.

Replaced with GeoSite.

Listening on local IPv6 interface (v4.1.7)   In `gui-config.json` file, add `isIpv6Enabled` key-value. Default value is `false`.

```
...
"isDefault": false,
"isIPv6Enabled": true,
"localPort": 8388,
...
```
