pow plugin

This plugin adds completion and commands for [pow](#), a zero-configuration Rack server for macOS.

To use it, add pow to the plugins array of your zshrc file:

```
plugins=(... pow)
```

Commands

- `kapow` will restart an app.

    ```
    kapow myapp
    ```

- `kaput` will show the standard output from any pow app.

- `repow` will restart the pow process.
