There are many Gatsby plugins that integrate with hosted cloud services, also known as SaaS (Software as a Service). You can search for [Gatsby plugins](#) as well as [Gatsby starters](#) that integrate with hosted services to source content and functionality. Some examples include:

- [Airtable](#)
- [AWS DynamoDB](#)
- [Contentful](#)
- [Firebase](#)
- [Google Docs](#)
- [Prismic](#)
- [Shopify](#)

These plugins will pull data from a hosted service and make it available to your Gatsby site via GraphQL.

More examples are described on the Gatsby blog:

- [Google Sheets](#)

You can also [write your own source plugin](#) to integrate with a service that isn't already represented.
