cp plugin

This plugin defines a `cpv` function that uses `rsync` so that you get the features and security of this command.

To enable, add `cp` to your `plugins` array in your zshrc file:

```
plugins=(... cp)
```

Description

The enabled options for rsync are:

- `-p`: preserves permissions.

- `-o`: preserves owner.

- `-g`: preserves group.

- `-b`: make a backup of the original file instead of overwriting it, if it exists.

- `-r`: recurse directories.

- `-hhh`: outputs numbers in human-readable format, in units of 1024 (K, M, G, T).

- `--backup-dir="/tmp/rsync-$USERNAME"`: move backup copies to "/tmp/rsync-$USERNAME".

- `-e /dev/null`: only work on local files (disable remote shells).

- `--progress`: display progress.
