Creating Plugins

You may be looking to build and perhaps publish a plugin that doesn't exist yet, or you may just be curious to know more about the anatomy of a Gatsby plugin (file structure, etc).

Core concepts

- Each Gatsby plugin can be created as an npm package or as a local plugin
- A `package.json` is required
- Plugins implement the Gatsby APIs for Node, server-side rendering, and the browser

This section of the docs includes the following guides:
