Example app utilizing next/router for routing

This example features:

- An app linking pages using `next/router` instead of `<Link>` component.
- Access the pathname using `next/router` and render it in a component

Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

▲ Deploy

How to use

Execute `create-next-app` with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example using-router using-router-app
# or
yarn create next-app --example using-router using-router-app
# or
pnpm create next-app -- --example using-router using-router-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
