The idea behind the example

The project uses [Preact](#), which is a fast 3kB alternative to React with the same modern API.

This example uses CRA with `react-app-rewired` for adding webpack aliases for preact.

It includes `@mui/material` and its peer dependencies, including `emotion`, the default style engine in MUI v5.

If you prefer, you can [use styled-components instead](#).

What's next?

You now have a working example project. You can head back to the documentation, continuing browsing it from the [templates](#) section.
