# One Dark UI theme

A dark UI theme that adapts to most syntax themes.

> The font used in the screenshot is [Fira Mono](#).

### Install

This theme comes bundled with Atom and can be activated by going to the **Settings > Themes** section and selecting "One Dark" from the **UI Themes** drop-down menu.

### Settings

In the theme settings you can:

- Change the **Font Size** to scale the whole UI up or down.
- Choose between 3 **Tab Sizing** modes.
- Hide the **dock buttons**.

To make changes, go to `Settings > Themes > One Dark UI > Settings` or the cog icon next to the theme picker.

### Customize

It's also possible to resize only certain areas by adding the following to your `styles.less` (Use DevTools to find the right selectors):

```
.theme-one-dark-ui {
  .tab-bar { font-size: 18px; }
  .tree-view { font-size: 14px; }
  .status-bar { font-size: 12px; }
}
```

**FAQ**

**Why do the colors change when I switch Syntax themes?** This UI theme uses the same background color as the chosen syntax theme. If that syntax theme has a light background color, it only uses its hue, but otherwise stays dark. This lets you use dark-light combos.

```
.theme-one-dark-ui {
  .tab-bar { font-size: 18px; }
  .tree-view { font-size: 14px; }
  .status-bar { font-size: 12px; }
}
```
