Variable examples

This page contains links to dashboards in Grafana Play with examples of template variables.

- Elasticsearch Metrics - Uses ad hoc filters, global variables, and a custom variable.
- Graphite Templated Nested - Uses query variables, chained query variables, an interval variable, and a repeated panel.
- Influx DB Group By Variable - Query variable, panel uses the variable results to group the metric data.
- InfluxDB Raw Query Template Var - Uses query variables, chained query variables, and an interval variable.
- InfluxDB Server Monitoring - Uses query variables, chained query variables, an interval variable, and an ad hoc filter.
- Prometheus templating - Uses chained query variables.
- Template Redux - Uses query variables, chained query variables, ad hoc filters, an interval variable, a text box variable, a custom variable, and a data source variable.
- Templating, repeated panels - Two sets of repeated panels use query variables.
- Templating showcase - Uses custom, query, chained query, and data source variables.
- Templating value groups - Uses query variable with value groups.
