pip plugin

This plugin adds completion for pip, the Python package manager.

To use it, add `pip` to the plugins array in your zshrc file:

```
plugins=(... pip)
```

pip cache

The pip plugin caches the names of available pip packages from the PyPI index. To trigger the caching process, try to complete `pip install`, or you can run `zsh-pip-cache-packages` directly.

To reset the cache, run `zsh-pip-clear-cache` and it will be rebuilt next the next time you autocomplete `pip install`.

Aliases

Alias	Description
pipreq	Create requirements file
pipir	Install packages from `requirements.txt` file
pipupall	Update all installed packages
pipunall	Uninstall all installed packages
