Protocol

This library was generated with [Angular CLI](#) version 9.0.0-rc.5.

Code scaffolding

Run `ng generate component component-name --project protocol` to generate a new component. You can also use `ng generate directive|pipe|service|class|guard|interface|enum|module --project protocol`.

> *Note: Don't forget to add* `--project protocol` *or else it will be added to the default project in your* `angular.json` *file.*

Build

Run `ng build protocol` to build the project. The build artifacts will be stored in the `dist/` directory.

Publishing

After building your library with `ng build protocol`, go to the dist folder `cd dist/protocol` and run `npm publish`.

Running unit tests

Run `ng test protocol` to execute the unit tests via [Karma](#).

Further help

To get more help on the Angular CLI use `ng help` or go check out the [Angular CLI README](#).
