I'm submitting a ...

- ☐ bug report
- ☐ feature request
- ☐ other (Please do not submit support requests here (below))

Notes:

- Please **do not** use the issue tracker for personal support requests (use Stack Overflow).

- Please **do not** derail or troll issues. Keep the discussion on topic and respect the opinions of others.

- Please **do not** open issues or pull requests regarding the code in `.htaccess` , `Modernizr` or `Normalize.css` (open them in their respective repositories).

Bug reports

A bug is a *demonstrable problem* that is caused by the code in the repository. Good bug reports are extremely helpful - thank you!

Guidelines for bug reports:

1. **Use the GitHub issue search** — check if the issue has already been reported.

   We have a long history of sometimes *very* detailed discussion of every line of code in the project. We want discussion, so it might still warrant an issue. It just helps to get the (sometimes extensive) context.

2. **Check if the issue has been fixed** — try to reproduce it using the latest `main` or development branch in the repository.

3. **Isolate the problem** — ideally create a reduced test case and a live example.

A good bug report shouldn't leave others needing to chase you up for more information. Please try to be as detailed as possible in your report. What is your environment? What steps will reproduce the issue? What browser(s) and OS experience the problem? What would you expect to be the outcome? All these details will help people to fix any potential bugs.

Example:

> *Short and descriptive example bug report title*
>
> *A summary of the issue and the browser/OS environment in which it occurs. If suitable, include the steps required to reproduce the bug.*
>
> *1. This is the first step*
> *2. This is the second step*
> *3. Further steps, etc.*
>
> `<url>` *- a link to the reduced test case*
>
> *Any other information you want to share that is relevant to the issue being reported. This might include the lines of code that you have identified as causing the bug, and potential solutions (and your opinions on their merits).*

Feature requests

Feature requests are welcome. But take a moment to find out whether your idea fits with the scope and aims of the project. It's up to *you* to make a strong case to convince the project's developers of the merits of this feature. Please provide as much detail and context as possible.
