Kube-controller-manager

Purpose

This library contains code to expose kube-controller-manager API.

Compatibility

There are *NO compatibility guarantees* for this repository, yet. It is in direct support of Kubernetes, so branches will track Kubernetes and be compatible with that repo. As we more cleanly separate the layers, we will review the compatibility guarantee. We have a goal to make this easier to use in the future.

Where does it come from?

`kube-controller-manager` is synced from https://github.com/kubernetes/kubernetes/blob/master/staging/src/controller-manager. Code changes are made in that location, merged into `k8s.io/kubernetes` and later synced here.

Things you should *NOT* do

1. Directly modify any files under `pkg` in this repo. Those are driven from `k8s.io/kubernetes/staging/src/k8s.io/kube-controller-manager`.
2. Expect compatibility. This repo is changing quickly in direct support of Kubernetes and the kube-controller-manager API.
