Improvements to Parallel Query Running

In case you missed it, in [3.10](#) we've added experimental support for Parallel Query Running. Depending on your site you will see dramatic improvements in `gatsby build` performance. We've moved more information [into LMDB](#), fixed a [bug](#) and [optimized](#) how we merge the state of the workers. You can also force the chunk size for each worker now by setting the `GATSBY_PARALLEL_QUERY_CHUNK_SIZE` environment variable.

To learn more about Parallel Query Running head to the [previous release notes](#).

Please give it a try and report back in the [PQR GitHub Discussion](#). We really appreciate any feedback!

Notable bugfixes & improvements

- `gatsby` : Display message about unfit flags found in `gatsby-config.js` per [PR #32394](#)
- `gatsby` : Correct pagination logic (fixing a regression) per [PR #32496](#)
- `gatsby-source-shopify` : Add a query for `ShopifyLocation` and `ShopifyInventoryLevel` per [PR #32450](#)
- `gatsby-plugin-mdx` : Performance improvement for a specific usage scenario (multiple GraphQL fields that require MDX processing) per [PR #32462](#)
- `gatsby-source-wordpress` : Fetch referenced media items during single node updates per [PR #32381](#)
- `gatsby-plugin-gatsby-cloud` : Fix bug where Incremental Builds on Gatsby Cloud would result in downloading duplicate JavaScript assets per [PR #32535](#)
