Contributing

We are open to, and grateful for, any contributions made by the community. By contributing to axios, you agree to abide by the [code of conduct](#).

Code Style

Please follow the [node style guide](#).

Commit Messages

Commit messages should be verb based, using the following pattern:

- `Fixing ...`
- `Adding ...`
- `Updating ...`
- `Removing ...`

Testing

Please update the tests to reflect your code changes. Pull requests will not be accepted if they are failing on [Travis CI](#).

Documentation

Please update the [docs](#) accordingly so that there are no discrepancies between the API and the documentation.

Developing

- `grunt test` run the jasmine and mocha tests
- `grunt build` run webpack and bundle the source
- `grunt version` prepare the code for release
- `grunt watch:test` watch for changes and run `test`
- `grunt watch:build` watch for changes and run `build`

Please don't include changes to `dist/` in your pull request. This should only be updated when releasing a new version.

Releasing

Releasing a new version is mostly automated. For now the [CHANGELOG](#) requires being updated manually. Once this has been done run the commands below. Versions should follow [semantic versioning](#).

- `npm version <newversion> -m "Releasing %s"`
- `npm publish`

Running Examples

Examples are included in part to allow manual testing.

Running example

```
$ npm run examples
# Open 127.0.0.1:3000
```

Running sandbox in browser

```
$ npm start
# Open 127.0.0.1:3000
```

Running sandbox in terminal

```
$ npm start
$ node ./sandbox/client
```
