Action Cable – Integrated WebSockets for Rails

Action Cable seamlessly integrates WebSockets with the rest of your Rails application. It allows for real-time features to be written in Ruby in the same style and form as the rest of your Rails application, while still being performant and scalable. It's a full-stack offering that provides both a client-side JavaScript framework and a server-side Ruby framework. You have access to your full domain model written with Active Record or your ORM of choice.

You can read more about Action Cable in the Action Cable Overview guide.

Support

API documentation is at:

- https://api.rubyonrails.org

Bug reports for the Ruby on Rails project can be filed here:

- https://github.com/rails/rails/issues

Feature requests should be discussed on the rails-core mailing list here:

- https://discuss.rubyonrails.org/c/rubyonrails-core
