Thanks for using RxJava but before you post an issue, please consider the following points:

- ☐ Please include the library version number, including the minor and patch version, in the issue text. In addition, if you'd include the major version in the title (such as `3.x`) that would be great.

- ☐ If you think you found a bug, please include a code sample that reproduces the problem. Dumping a stacktrace is usually not enough for us.

- ☐ RxJava has more than 150 operators, we recommend searching the javadoc for keywords of what you try to accomplish.

- ☐ If you have a question/issue about a library/technology built on top of RxJava (such as Retrofit, RxNetty, etc.), please consider asking a question on StackOverflow first (then maybe on their issue list).

- ☐ Questions like "how do I X with RxJava" are generally better suited for StackOverflow (where it may already have an answer).

- ☐ Please avoid cross-posting questions on StackOverflow, this issue list, the Gitter room or the mailing list.
