A macro listed for import was not found.

Erroneous code example:

```
#[macro_use(drink, be_merry)] // error: imported macro not found
extern crate alloc;

fn main() {
    // ...
}
```

Either the listed macro is not contained in the imported crate, or it is not exported from the given crate.

This could be caused by a typo. Did you misspell the macro's name?

Double-check the names of the macros listed for import, and that the crate in question exports them.

A working version would be:

"'ignore (cannot-doctest-multicrate-project) // In some_crate crate: #[macro_export] macro_rules! eat { ... }

#[macro_export] macro_rules! drink { ... }

// In your crate: #[macro_use(eat, drink)] extern crate some_crate; //ok! "'
