Semantic UI

Semantic is a UI framework designed for theming.

Key Features

- 50+ UI elements
- 3000 + CSS variables
- 3 Levels of variable inheritance (similar to SublimeText)
- Built with EM values for responsive design
- Flexbox friendly

Semantic allows developers to build beautiful websites fast, with **concise HTML**, **intuitive javascript**, and **simplified debugging**, helping make front-end development a delightful experience. Semantic is responsively designed allowing your website to scale on multiple devices. Semantic is production ready and partnered with frameworks such as **React**, **Angular**, **Meteor**, and **Ember**, which means you can integrate it with any of these frameworks to organize your UI layer alongside your application logic.

2.4.0 Release (Sep 17th, 2018)

Semantic UI `2.4` is now available. Read up on what's new in the docs.

Migration info from `1.x` can be found in the 2.0 release notes

User Support

Please help us keep the issue tracker organized. For technical questions that do not include a specific JSFiddle test case (bug reports), or feature request please use StackOverflow to find a solution.

Visit our contributing guide for more on what should be posted to GitHub Issues.

Install

Recommended Install

```
npm install semantic-ui  # Use themes, import build/watch tasks into your own
gulpfile.
```

Semantic UI includes an interactive installer to help setup your project.

- For more details on setup visit our getting started guide.
- To learn more about theming please read our theming guide

Additional Versions

Environment	Install Script	Repo
CSS Only	`npm install semantic-ui-css`	CSS Repo
LESS Only	`npm install semantic-ui-less`	LESS Repo
LESS plugin	`npm install less-plugin-semantic-ui`	LESS Plugin Repo
EmberJS	`ember install:addon semantic-ui-ember`	Ember Repo
Meteor - LESS	`meteor add semantic:ui`	Meteor Repo
Meteor - CSS	`meteor add semantic:ui-css`	CSS Repo
Bower	`bower install semantic-ui`	

Check out our integration wiki for more options.

Browser Support

- Last 2 Versions FF, Chrome, Safari Mac
- IE 11+
- Android 4.4+, Chrome for Android 44+
- iOS Safari 7+
- Microsoft Edge 12+

Although some components will work in IE9, grids and other flexbox components are not supported by IE9 and may not appear correctly.

Community

Getting Help

Please **do not post** usage questions to GitHub Issues. For these types of questions use our [Gitter chatroom] or StackOverflow.

Submitting Bugs and Enhancements

GitHub Issues is for suggesting enhancements and reporting bugs. Before submiting a bug make sure you do the following:

- Check out our contributing guide for info on our release cycle.
- Fork this boilerplate JSFiddle to create a test case for your bug. If a bug is apparent in the docs, that's ok as a test case, just make it clear exactly how to reproduce the issue. Only bugs that include a test case can be triaged.

Pull Requests

When adding pull requests, be sure to merge into the [next](#) branch. If you need to demonstrate a fix in `next` release, you can use [this JSFiddle](#)

International

- **Chinese** A Chinese mirror site is available at http://www.semantic-ui.cn.
- **Right-to-Left (RTL)** An RTL version can be created using our build tools by selecting `rtl` from the install script.
- **Translation** To help translate see the [Wiki Guide](#) for translations.

Resources

Resource	Description
Bugs & Feature Requests	All bug submission **require** a link to a test case, and a set of steps to reproduce the issue. You can make a test case by forking this [JSFiddle](#), then submit your [bug report on GitHub Issues](#)
Live Chat	Join our [Gitter.im Room](#)
Newsletter Updates	Sign up for updates at [semantic-ui.com](#)
Additional Resources	Submit a question on [StackOverflow](#) or ask our [Google Group](#)

Places to Help

Project	How To Help	Next Step
Localization	Help us translate Semantic UI into your language	[Join our Translation Community](#)
[SCSS](#)	SASS needs PR to support variables inside `@import`	[Add Pull Request](#) for [#739](#)
