Custom Express Server example

Most of the time the default Next.js server will be enough but there are times you'll want to run your own server to integrate into an existing application. Next.js provides a custom server api.

Because the Next.js server is a Node.js module you can combine it with any other part of the Node.js ecosystem. In this case we are using express.

Deploy your own

Deploy the example using Vercel or preview live with StackBlitz

▲ Deploy

How to use

Execute `create-next-app` with npm or Yarn to bootstrap the example:

```
npx create-next-app --example custom-server-express custom-server-express-app
# or
yarn create next-app --example custom-server-express custom-server-express-app
# or
pnpm create next-app -- --example custom-server-express custom-server-express-app
```
