Puppeteer.registerCustomQueryHandler() method

Registers a custom query handler. After registration, the handler can be used everywhere where a selector is expected by prepending the selection string with `<name>/`. The name is only allowed to consist of lower- and upper case latin letters.

Signature:

```
registerCustomQueryHandler(name: string, queryHandler: CustomQueryHandler): void;
```

Parameters

Parameter	Type	Description
name	string	The name that the custom query handler will be registered under.
queryHandler	CustomQueryHandler	The custom query handler to register.

Returns:

void

Example

```
puppeteer.registerCustomQueryHandler('text', { ... });
const aHandle = await page.$('text/...');
```
