Notable changes

Updated REST APIs

- The `/headers/` and `/blockfilterheaders/` endpoints have been updated to use a query parameter instead of path parameter to specify the result count. The count parameter is now optional, and defaults to 5 for both endpoints. The old endpoints are still functional, and have no documented behaviour change.

  For `/headers`, use `GET /rest/headers/<BLOCK-HASH>.<bin|hex|json>?count=<COUNT=5>` instead of `GET /rest/headers/<COUNT>/<BLOCK-HASH>.<bin|hex|json>` (deprecated)

  For `/blockfilterheaders/`, use `GET /rest/blockfilterheaders/<FILTERTYPE>/<BLOCK-HASH>.<bin|hex|json>?count=<COUNT=5>` instead of `GET /rest/blockfilterheaders/<FILTERTYPE>/<COUNT>/<BLOCK-HASH>.<bin|hex|json>` (deprecated)

  (#24098)
