getServerSideProps Export Error

Why This Error Occurred You attempted to statically export your application via `next export`, however, one or more of your pages uses getServerSideProps.

The `getServerSideProps` lifecycle is not compatible with `next export`, so you'll need to use `next start` or a serverless deployment.

Possible Ways to Fix It

1. If you'd like to keep your application static, you can use `getStaticProps` instead of `getServerSideProps`.

2. If you want to use server-side rendering, update your build command and remove `next export`. For example, in your `package.json`:

```diff
diff --git a/bla.json b/bla.json
index b84aa66c4..149e67565 100644
--- a/bla.json
+++ b/bla.json
@@ -1,7 +1,7 @@
{
  "scripts": {
    "dev": "next dev",
-    "build": "next build && next export",
+    "build": "next build",
    "start": "next start"
  }
}
```

   Note: Removing `next export` does not mean your entire application is no longer static. Pages that use `getStaticProps` or no lifecycle **will still be static**!
