`popstate` called with empty state

Why This Error Occurred   When using the browser back button the popstate event is triggered. Next.js sees a `popstate` event being triggered but `event.state` did not have `url` or `as`, causing a route change failure.

Possible Ways to Fix It   The only known cause of this issue is manually manipulating `window.history` instead of using `next/router`. Starting from version 9.5, Next.js will ignore `popstate` events that contain `event.state` not created by its own router.
