jenv plugin

[jenv](#) is a Java version manager similar to [rbenv](#) and [pyenv](#).

This plugin initializes jenv and provides the `jenv_prompt_info` function to add Java version information to prompts.

To use, add `jenv` to your plugins array in your zshrc file:

```
plugins=(... jenv)
```

Theme example

You can modify your `$PROMPT` or `$RPROMPT` variables to run `jenv_prompt_info`.

For example:

```
PROMPT="%~$ "
RPROMPT='$(jenv_prompt_info)'
```

changes your prompt to:

```
~/java/project$ █                                        oracle64-1.6.0.39
```
