Head elements example

For every page you can inject elements into the page head. This way you can add stylesheets, JS scripts, meta tags, a custom title or whatever you think is convenient to add inside the `<head>` of your page.

This example shows in `pages/index.js` how to add a title and a couple of meta tags.

Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

▲ **Deploy**

How to use

Execute [`create-next-app`](#) with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example head-elements head-elements-app
# or
yarn create next-app --example head-elements head-elements-app
# or
pnpm create next-app -- --example head-elements head-elements-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
