No Stylesheets In Head Component

Why This Error Occurred

A `<link rel="stylesheet">` tag was added using the `next/head` component.

We don't recommend this pattern because it will potentially break when used with Suspense and/or streaming. In these contexts, `next/head` tags aren't:

- guaranteed to be included in the initial SSR response, so loading could be delayed until client-side rendering, regressing performance.

- loaded in any particular order. The order that the app's Suspense boundaries resolve will determine the loading order of your stylesheets.

Possible Ways to Fix It

Document

Add the stylesheet in a custom `Document` component.

```js
// pages/_document.js
import { Html, Head, Main, NextScript } from 'next/document'

export default function Document() {
  return (
    <Html>
      <Head>
        <link rel="stylesheet" href="..." />
      </Head>
      <body>
        <Main />
        <NextScript />
      </body>
    </Html>
  )
}
```

Note that the functional syntax for `Document` above is preferred over the `class` syntax, so that it will be compatible with React Server Components down the line.
