Easily clear `float`s by adding `.clearfix` **to the parent element**. Can also be used as a mixin.

Use in HTML:

```html
<div class="clearfix">...</div>
```

The mixin source code:

{{< scss-docs name="clearfix" file="scss/mixins/_clearfix.scss" >}}

Use the mixin in SCSS:

```scss
.element {
  @include clearfix;
}
```

The following example shows how the clearfix can be used. Without the clearfix the wrapping div would not span around the buttons which would cause a broken layout.

{{< example >}}

Example Button floated left   Example Button floated right

{{< /example >}}
